

This machine combines four important border production operations into one simple procedure. BordaMark automatically marks the border for later attachment of mattress handles, marks the border for the venting operation, measures the material to the required length and finally cuts the finished border – all in one pre-programmed operation.

- ❖ Massive memory for border programmes.
- ❖ Input facility for size and quantity.
- ❖ Material run-out monitoring system.
- ❖ Input facility for stretch compensation factor.
- ❖ Border widths from 75mm – 500mm.

Dimegrove Computer Controlled Border Mark and Cut Machine

Marking	Knife & rollers	Special features & options
---------	-----------------	----------------------------
